1. WEEKLY EXECUTIVE SUMMARY (■■■■ & ■■■■ ■■ ■■)

During the week of September 8–12, 2026, Alex wore the Vori Neuro-Interventional Eyewear during core academic instruction (Math, Reading, Group Work). A total of **21 sensory overload / attentional drift events** were detected via real-time temple/post-auricular EEG sensors (Alpha Power Gating < 0.35 or TBR > 3.5) and eye-tracking gaze stability metrics. Notably, **85.7% (18/21)** of these micro-escalations were successfully de-escalated in real time using subtle peripheral fractal visual cues (D=1.35) and breathing-paced micro-prompts without requiring classroom teacher removal or causing peer disruption.

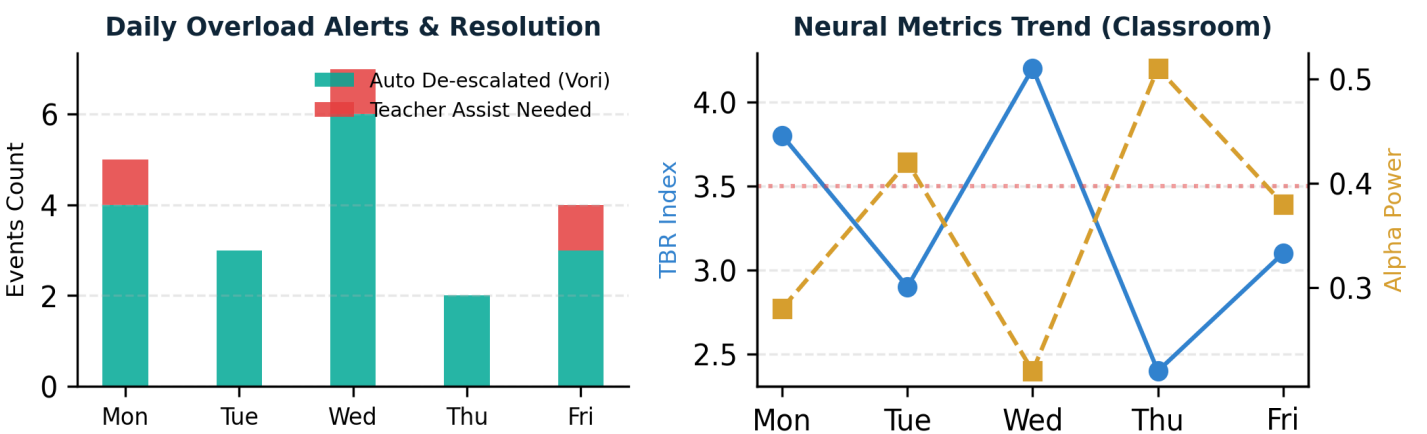

Figure 1: Daily Intervention Frequency & Neural Biofeedback Trends (TBR & Alpha Power Gating)

2. DETAILED EVENT LOG & INTERVENTION MEASUREMENTS (ABC Data & ■■■/■■■ ■■■)

Day & Time	Class Context (Antecedent)	Trigger Indicator	Severity / Peak Intensity	Vori Micro-Cue Applied	Duration to Recovery	Outcome / Teacher Assist
Mon 10:15 AM	Math Group Work	Loud chatter / High SNR	Level 2 (Alpha 0.25, TBR 4.1)	Peripheral Fractal Ring (Teal)	38 sec	Auto De-escalated
Mon 01:45 PM	Reading Transition	Visual clutter / Movement	Level 1 (TBR 3.8)	Slow Paced Breathing Wave	25 sec	Auto De-escalated
Tue 11:00 AM	Independent Quiz	Focus drift / Eye gaze erratic	Level 1 (TBR 3.6)	Gaze-anchored Focus Ring	30 sec	Auto De-escalated
Wed 10:30 AM	Math Lesson (Board)	Auditory Overload / Noise	Level 3 (Alpha 0.18, TBR 4.8)	Fractal Canopy + Paced Pulse	95 sec	Teacher Assist Needed (Breathing break)

Thu 09:30 AM	Morning Assembly	Crowd / Fluorescent lights	Level 1 (Alpha 0.32)	Peripheral Dimming Cue	20 sec	Auto De-escalated
Fri 01:15 PM	Science Lab	Tactile / Group activity	Level 2 (Alpha 0.22, TBR 3.9)	Peripheral Fractal Ring	45 sec	Auto De-escalated

3. CLINICAL RECOMMENDATIONS & IEP/504 ALIGNMENT (■■ ■■■■ ■ ■■ ■■)

- **Classroom Environment (School / IEP Alignment):** Sensory triggers peak during Wednesday Math (auditory noise) and Friday Science Lab (group chatter). Recommend pre-task heavy work (e.g. wall pushes, carrying books) prior to Math instruction and seating Alex away from fluorescent light glare and main entryways.
- **Vori Software Calibration:** Maintain Alpha Power Gating threshold at 0.35. Increase fractal visual cue D-value slightly from 1.35 to 1.40 for reading tasks to boost cognitive engagement while keeping sensory stress low.
- **Parent & Clinic Home Protocol:** Practice 10-second slow-paced breathing (6 breaths/min) using the Vori companion app before bedtime to reinforce self-regulation pathways.
